Ramp Test: What Must Stay the Same?

Tracking #: 2026-11-12-EMM-SCI-RAMP-CONTROLS-45

Fictional practice data - no actual experiment claimed

Ramp	Height	Trial 1	Trial 2	Trial 3
Low	10 cm	42 cm	44 cm	43 cm
High	20 cm	55 cm	57 cm	56 cm

1. Circle the one thing changed deliberately and write its two tested heights with cm units.

2. Name the measured result, its unit, and TWO conditions that must be kept the same for a fair trial.

3. Find the mean distance for the low ramp; show the addition and division, and label cm.

Ramp Test: What Must Stay the Same?

Tracking #: 2026-11-12-EMM-SCI-RAMP-CONTROLS-45

Fictional practice data - no actual experiment claimed

Ramp	Height	Trial 1	Trial 2	Trial 3
Low	10 cm	42 cm	44 cm	43 cm
High	20 cm	55 cm	57 cm	56 cm

4. Find the mean for the high ramp, and calculate the difference between the two means in cm.

5. A student says 'we also pushed the car on the high ramp.' Explain why that would make the comparison unfair; describe the correct repeat test.
