Spring Toy: Follow the Energy

Tracking #: 2026-11-12-NAT-SCI-SPRING-ENERGY-45

Fictional spring-toy data; floor and car unchanged

Spring compression	Trial 1	Trial 2	Trial 3
Short	60 cm	62 cm	64 cm
Long	86 cm	88 cm	90 cm

1. Draw a four-box arrow chain from compressed spring to moving car to sound and warming/friction. Label each energy form.

2. State the changed variable, the measured result and the units that belong to that result.

3. Compute the mean car distance for short and long compression in cm.

Fictional spring-toy data; floor and car unchanged

Spring compression	Trial 1	Trial 2	Trial 3
Short	60 cm	62 cm	64 cm
Long	86 cm	88 cm	90 cm

4. Explain why the table supports a claim about distance but does NOT directly measure sound or heat.

5. Plan a fair physical repeat: name TWO controls, one safe measurement step and a careful conclusion limited to these trials.
