No-Heat Kitchen Lab: Measure, Check, Reset

Tracking #: 2026-11-13-EMM-COOK-MEASURE-46

Practical water-only measurement record; use cups, NOT fractions written with slash marks

Target volume	Valid example
1 cup	2 half-cups or 4 quarter-cups
1 and a half cups	1 full cup + 1 half-cup
1 and a quarter cups	1 cup + 1 quarter-cup
3 quarters of a cup	1 half-cup + 1 quarter-cup
Cleanup	Empty bowl, dry, return tools

1. Complete a real setup check: record the actual clean tools present, sink/soap/clean towel available, and where you will safely pour. Mark any missing tool and ask an adult, do not invent availability.

2. MEASURE exactly one cup of water using two half-cup pours. Record each real pour and any spill. Empty the bowl and MEASURE one cup again using four quarter-cup pours; compare the two results.

Practical water-only measurement record; use cups, NOT fractions written with slash marks

Target volume	Valid example
1 cup	2 half-cups or 4 quarter-cups
1 and a half cups	1 full cup + 1 half-cup
1 and a quarter cups	1 cup + 1 quarter-cup
3 quarters of a cup	1 half-cup + 1 quarter-cup
Cleanup	Empty bowl, dry, return tools

3. MEASURE one and a half cups using one full cup plus one half cup. Then make one and a quarter cups by adding the correct measures. Record real pours and any adjustment.

4. A friend holds a liquid measuring cup at an angle and says the level is fine. Describe the specific error, demonstrate a safer level-check if available and record what changed.

Tracking #: 2026-11-13-EMM-COOK-MEASURE-46

Practical water-only measurement record; use cups, NOT fractions written with slash marks

Target volume	Valid example
1 cup	2 half-cups or 4 quarter-cups
1 and a half cups	1 full cup + 1 half-cup
1 and a quarter cups	1 cup + 1 quarter-cup
3 quarters of a cup	1 half-cup + 1 quarter-cup
Cleanup	Empty bowl, dry, return tools

5. Solve three recipe requests without adding food: 'three quarters cup', 'one and a half cups', and 'one and a quarter cups'. For each draw or list exact cup combinations and explain how you checked.

6. DO a full real no-heat cleanup: empty/reuse water, dry tray/counter, return cups, note spills, and wash hands if needed. Record actual measurement time and cleanup minutes; explain two improvements for next time.
