# Flight Lab: Compare Trials Fairly

Emma | Science | November 11, 2026 | Page 1 of 2

**Tracking #: 2026-11-11-EMM-SCI-FLIGHT-DATA-44**

**Fictional straw-rocket trial records (all distances in feet)**

| Design | Trial 1 | Trial 2 | Trial 3 |
|---|---|---|---|
| A - no fins | 6 | 7 | 5 |
| B - four fins | 8 | 9 | 7 |
| Both | Same straw and start | Same launcher | Same room |

**1. Write the average distance of A with addition and division, and label the measurement in feet.**

2. Write the average distance of B and how many feet farther it traveled on average than A.

3. Name TWO test conditions the table says were kept the same and why that matters.

# Flight Lab: Compare Trials Fairly

**Fictional straw-rocket trial records (all distances in feet)**

| Design | Trial 1 | Trial 2 | Trial 3 |
|---|---|---|---|
| A - no fins | 6 | 7 | 5 |
| B - four fins | 8 | 9 | 7 |
| Both | Same straw and start | Same launcher | Same room |

**4. A student says ’fins always make every rocket go farther.’ Write a more careful claim using the test results and their limits.**

5. Design one fair new test changing only fin size. Write what stays the same and what distance you would measure in three trials.
